FIGURE 1
Total Effect of Initial Win on Future ADA Scores: γ
This figure plots ADA scores after the election at time $t + 1$ against the Democrat vote share, time t . Each circle is the average ADA score within 0.01 intervals of the Democrat vote share. Solid lines are fitted values from fourth-order polynomial regressions on either side of the discontinuity. Dotted lines are pointwise 95 percent confidence intervals. The discontinuity gap estimates $\gamma = \pi_d(P_{t+1}^{old} - P_{t+1}^{new}) + \pi_r(P_{t+1}^{old} - P_{t+1}^{new})$
